

VesselWatch is the industry leading two-way radio communication solution. Capable of integrating with all your vessel's systems and sending swift, discreet notifications keeping you in total control wherever you are.

New - Dashboard with Real Time alarm feed, application manager to monitor your Crew Call solution and system manager

New - Broadcast text message from Smart Device/Workstation to any radio user or group

New - Crew Call application manager with real time debug to find faults fast and resolve quickly

New - Individual and team Online/Offline tracking

New - Advanced alarm escalation manager giving total flexibility to your alarm messages

Compatible with DMR and TETRA systems

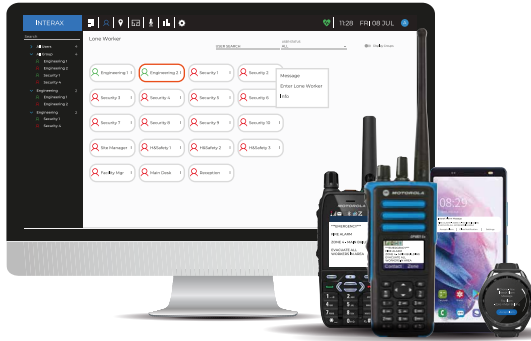

PLUS - Compatible with Smart Devices to give full control anywhere onboard

Connection to industry leading alarm system protocols to deliver proactive alerts to your team

Total control of your vessel's alarms and system alerts.

All messages can be handled differently - distributed to the most appropriate radio/group, for the quickest response.

Never miss a message - multi stage escalation plan

Automatically sent to the primary group, no response, the alarm message will then be sent to the backup group. Still no response, the alert can be sent to all radios.

Delivered with pin-point accuracy

Refine further with each alarm key word having its own message route. Example:

Key word: FAULT dispatched to engineering.

Key word: STATUS OK, logged but not sent.

Expertise That You Can Trust

We are communications experts, a team of designers and engineers with a passion for creating systems that make your life easier. With over 19 years experience in the luxury marine industry, you can be reassured that we have the knowledge to fully understand and service your needs.

Over 19 years luxury marine experience

Dedicated Support Team

Over 3500 solutions worldwide
